- Alex Bertels

Project Specifications:

Currently, the room reservation system at the Missouri University of Science and Technology requires that a form be filled out and submitted to reserve a room at a given time. If the room is already reserved, then another request must be made. This back-and-forth process is extremely time consuming and inconvenient for all involved. Being able to login to a site, see room availability, and make reservations would greatly ease this process.

Get a Room is proposing such a system. This system would automate the process of reserving a room, eliminating the need for someone to manually go through submitted requests. In addition, this system would display previously hidden availability information to the user to eliminate the problem of the user placing a request only to find that a room is already reserved. Faculty, staff, and select officers of student-run organizations would be able to log in and reserve a room instantly.
